How to read your lab result

- Full-spectrum:** Hemp extracts that contain multiple cannabinoids & terpenes. In addition to CBD, there are many other cannabinoids, such as cannabigerol (CBG), cannabinol (CBN), cannabichromene (CBC), and terpenes.
- Cannabinoids:** A group of chemical compounds extracted from hemp. Examples are CBD, CBG, CBN, CBC, and hundreds of others.
- Terpenes:** Aromatic essential oils that are naturally occurring in hemp plants.
- Mycotoxin:** Toxic byproducts of fungi that can cause disease and death in humans. Lab tests ensure that both aflatoxins and ochratoxins are non-detectable.
- Residual Solvents:** Also known as volatile organic compounds (VOCs), these are FDA regulated solvents for dietary products that can cause harmful exposure for humans. Lab tests ensure levels are non-detectable.
- Heavy Metals:** Presence of heavy metals can lead to heavy metal toxicity in the body. Lab tests ensure levels are non-detectable.
- Pesticides:** Pesticides are meant to keep insects and other unwelcome visitors away from crops, and can be harmful to humans. Lab tests ensure levels are non-detectable.
